

TUNNELS AND GREENHOUSES

Greenhouse film

05

UV-stabilised LDPE tunnel and greenhouse film with an anti-fog, anti-drip coating on both sides. Diffused light spreads evenly over the whole crop, and the film lasts more than twice as long as ordinary plastic sheeting.

SPECIFICATIONS

Thickness	80–250 micron
Width	1–26 m
Length	Made to order
Colours	White, transparent, blue, yellow, red, green
Material	LDPE with UV and anti-ageing stabilisers
Coating	Anti-fog and anti-drip, both sides
Packing	Rolls, bagged

WHY FARMERS CHOOSE IT

- ✓ **No drips on the crop**
Condensation runs down the film instead of dripping onto leaves, cutting disease.
- ✓ **Even, diffused light**
Light is spread through the tunnel for balanced growth and less leaf scorch.
- ✓ **Long service life**
UV and anti-ageing additives keep the film strong through harsh weather.
- ✓ **Any tunnel size**
Widths up to 26 m cover large multi-span structures in one sheet.

Used for: Vegetable and flower tunnels, multi-span greenhouses, seedling nurseries and hardening-off shade houses.
