

Design Features

Precise industry positioning

Precise industry positioning: Specifically designed for quadratic torque loads (i.e., load torque is proportional to the square of the speed) such as pumps, fans, and compressors. This makes it perform exceptionally well in fields such as HVAC (Heating, Ventilation and Air Conditioning), water supply, and wastewater treatment.

Compact structural design

Its compact design saves control cabinet space. It supports side-by-side installation, which helps to improve the utilization of cabinet space.

Built-in application macros

A variety of application macros are pre-programmed. Users only need to select the corresponding macro and make a few parameter settings to quickly put it into operation, which greatly simplifies the debugging process.

Operation Keypad

Equipped with an easy-to-use control panel with potentiometers (knobs), it allows for quick parameter setting, start/stop, and speed adjustment.

- Optional features include a rotary keypad with external communication access (EN-LED15-D, EN-LED16-D).
