# Single-span tunnel

04

A simple, quick-to-build single-span tunnel and the most affordable way to start growing under cover. Both sides open for natural ventilation, and sliding doors at each end give easy access for people and equipment.

**1 span**  
free-standing tunnel

**Roll-up**  
sides for natural airflow

**Sliding**  
doors front and rear

**Shade net**  
option over the top

| Size        | Width and length made to order             |

WHY GROWERS CHOOSE IT

- ✓ **Quick to assemble**  
A simple bolt-together steel frame that goes up fast with a small team.
- ✓ **Natural ventilation**  
Roll up both sides to let hot air out on warm days.
- ✓ **Cooler in summer**  
Add a black or green shade net over the top to bring the temperature down.
- ✓ **Built for the weather**  
Large-diameter steel tubes stand up well to wind, rain and hail.

**Best for:** Vegetables, berries, herbs and seedlings, and farms taking their first step into protected growing.
