

PRODUCT CATALOG · IRRIGATION & WATER

Reverse-osmosis water treatment

Reverse-osmosis plants that turn salty, hard or dirty borehole, dam and municipal water into clean water for drinking, livestock, spraying and packhouses. Single and double stage, from small units to large plants.

WHO WE ARE

Farm equipment, at the price it *actually* costs.

Built by farmers, for farmers. Andrivo sources farm infrastructure and equipment from international manufacturers, handles the entire import process, and delivers to your farm anywhere in Southern Africa.

Farmers usually pay for a chain of markups they never see — a factory, an export agent, an importer and a local distributor, each adding a margin nobody discloses. Andrivo removes that chain. Our only charge is a service fee on top of the true cost: 30%, or 25% with a referral code.

How every quote works

1**Factory direct**

We work directly with the manufacturer of every machine in this catalog — no middlemen.

2**Inspected before it ships**

Each order is checked against the factory spec sheet before it leaves the plant.

3**Shipping & customs handled**

Freight, duties, clearing and transport to your gate are all managed by us.

4**Parts & aftersales**

Spares in stock, and every machine logged to your farm under My Farm by Andrivo.

CONTENTS

What's in this catalog

Reverse osmosis removes salts, hardness, nitrates and bacteria, making salty or hard borehole water safe to drink, for livestock, for spraying and for packhouses. Tell us your water source, a water test if you have one, and how many litres per hour you need, and we will size the plant.

What reverse osmosis does	04

Capacities are shown in T/H: tonnes per hour, where 1 T/H is 1 000 litres of clean water per hour.

REVERSE OSMOSIS EQUIPMENT

Reverse osmosis is a membrane separation technology developed in the 1980s. It mainly uses the permeation principle of semi permeable membranes to apply a pressure to it in a certain way, which is opposite to the natural permeation direction, causing water in the concentrated solution to permeate into the dilute solution. The device composed of reverse osmosis components is a reverse osmosis device, which is automatically controlled or unmanned through PLC/DCS, etc.
