

IN THE FIELD

Mulch film

04

Laid over planting beds to smother weeds, hold in moisture and warm the soil, so crops establish faster and need less water and weeding. Made from 100% virgin PE, with the raw-material mix adjusted to the season length you need.

Packing	Rolls, bagged
Minimum order	1 ton

WHY FARMERS CHOOSE IT

- ✓ **Biodegradable option**
Available on request for crops where lifting film is impractical.
- ✓ **Tough and stretchy**
Strong tear resistance and high elongation, so it lays by machine without splitting.
- ✓ **Silver/black for heat and pests**
The silver side reflects light and heat and helps repel aphids and thrips.
- ✓ **Low minimum order**
From 1 ton, with custom colours available.

Used for: Strawberries, tomatoes, peppers, melons, cucurbits and other vegetables in the open field or under tunnels.
