

23 Suspended Gear Reducer

ZGY suspended gear reducer is a newly developed hard tooth surface reducer. It has the characteristics of small volume, light weight, strong load-bearing capacity, high efficiency, simple structure, and easy installation and maintenance. The input shaft of the reducer is connected to the motor by a belt pulley, and the output is connected by a hollow shaft single key. There are a total of 19 models.

Technical parameters	
Input power	2.5–193 kW
Output torque	3.5–22 500 N·m
Transmission ratio	10–25

24 XTY Series Conveyor Drive System

The conveyor drive system integrates a suspended gear reducer mounted directly on the drive drum shaft. The motor is supported by a mounting bracket, with its shaft connected to the reducer input shaft via a belt pulley. The reducer is secured by a torque arm and drives the rotation of the drum. An optional backstop device can be included for reverse rotation prevention.

Technical parameters	
Input power	15–55 kW
Drum diameter	500–800 mm Ø
Belt speed	1.25–2.5 m/s
