# Blackout systems

12

Blackout curtains control day length to mimic the seasons. You decide when the crop flowers, reach harvest sooner and grow year-round with several harvests a year.

**Blackout screen**

A steel frame with rack-and-pinion drive pulls a blackout screen across inside the greenhouse.

**Black-and-white film**

Used as a cover or as a roll-up on side windows, so the house can switch to natural light.

**Light-dep tunnels and LED lights**

Complete light-deprivation tunnels, plus light traps and LED grow lights to go with them.
