

Packing Table

- Packing tables normally installed at the exits of electronic sorter for premium packing.
- Products from two adjacent exits are distributed to one combined packaging table, with return belt at each exit.
- Packers take the empty cartons from the motorless roll conveyor above and put on the scale to do premium packing like labeling, putting mesh bags, uniform placing.
- Once the cartons reach a certain weight, will be moved to the motor roll conveyor below.

Box Filler & Weigher

- The fill&weigh system normally include takeout belts for filling, scales for box weighing, sensors for box recognition, roll conveyor for full box transportation, control panel for system controlling.
- Working process:
 1. Put empty boxes on the scales of each exit.
 2. Belts start to fill and stop once the box reach a preset weight.
 3. Full boxes are automatically pushed onto the roller conveyor for collection.
 4. Workers put empty boxes and belts restart filling.
