

Loosening shovels, plow tips and rake blades

Product characteristics

We select spring steel with manganese steel and boron steel properties as raw materials. Depending on the material, after undergoing different heat treatment processes, the idealized hardness value is achieved. Hardness of manganese steel material: 45-48HRC; The hardness of boron steel material is 45-48HRC. We will select different materials according to your requirements. The achievable diameter range is 12"-40" (300-1010mm), and the achievable thickness is 3-12mm. The shapes are notched, disc-shaped, flat, corrugated, etc. If you need a new type, we can produce it according to your drawings or samples.

Loosening shovel			
Length (mm)	Width (mm)	Height (mm)	Thickness (mm)
A	B	C	/
310	280	50	4
300	230	110	5
